

The mining companies want to destroy the land and the water, but I'm not leaving. I'm here for the long haul. I'm going to continue fighting.

Maria Gunnoe, Bob White, WV

hard and barren, causing flash floods and landslides. communities from flooding. Mountaintop removal sites are Topsoil and trees absorb rainfall, which helps protect valley

Increased Flooding

known as sludge impoundments. underground or filling valleys to create giant retention ponds processing—called sludge or slurry—is disposed by pumping it off releases harmful chemicals into water. The waste from coal

Contamination of Water Supplies

Many rural areas are dependent on well sites have been developed. but less than 5% of mountaintop removal land is needed for economic development, than underground mining. Some claim flat

Loss of Economy and Job Opportunities

Mountaintop removal takes fewer workers

Blasts shake and crack homes, destroy wells and send huge rocks rolling down hillsides. Mining dust covers homes and can cause deadly lung diseases.

Damage From Blasting and Dust

have been destroyed by dumping waste into valley streams. Conservative estimates say that over 2,000 miles of streams permanently removing habitat for hundreds of species.

Destruction of Mountains and Habitat

Mountains are the heart of Appalachian culture. Mountaintop removal mining displaces people and destroys ancestral homes and access to cemeteries. The places that helped shape the culture are destroyed, and a people's way of life are forever altered.

Mountaintop Removal Destroys Our Communities

MOUNTAINTOP REMOVAL COAL MINING

Devastating communities in Appalachia and destroying America's oldest mountains.

The Alliance for Appalachia is a coalition working to end mountaintop removal coal mining and support a just, sustainable economy in Appalachia.

Please contact a member of The Alliance for Appalachia to learn how you can see mountaintop removal firsthand and to get involved in stopping this destructive practice.

Coal is not cheap. Not for the residents. Not for the miners. The truth about coal is my baby girl is paying for coal with her childhood and her health, and to me that's not cheap at all.

Erica Urias, KY

This isn't mining—this is the wholesale destruction of a land and people.

- Ann League, Tennessee

WHAT IS MOUNTAINTOP REMOVAL?

Mountaintop removal is a method of extracting coal that occurs in Kentucky, Tennessee, West Virginia and Virginia. This dangerous and destructive practice has destroyed over 1 million acres of land.

The trees are bulldozed, the mountaintops are blown off, and tons of debris are dumped in the valleys. Less than 5% of mountaintop removal sites have been "reclaimed" for commercial / economic use; native forests destroyed during the process will not grow back for generations—if ever.

Our electricity connects us to mountaintop removal coal mining. When we flip our light switches, we may be contributing to the destruction of mountains, communities and even lives.

TAKE ACTION TO STOP IT

- Find out if your home uses mountaintop removal coal for electricity and hear community members' stories at our partnership website ilovemountains.org.
- Urge the Obama administration to reinstate the original intent of the Clean Water Act and to prevent mining waste from being used as fill material. Urge your legislators to enforce regulations on coal and endorse renewable energy, energy efficiency, and conservation.
- Spread the word by hosting speakers and movie nights, planning fundraisers, writing letters to your local paper, and sharing info on the internet.
- Use less energy and work for renewable energy at home, at work and in your community.

We should not divorce our history, but it is time that we begin to create a new history, and become part of a solution to save our state, our country, and the world.

Kathy Selva, Wise County, VA

- **Sustainable Forestry** provides long-term income Appalachia and encourages small business growth.
- **Tourism** is among the fastest growing industries in energy, and a stronger economy.
- **Renewable Energy** projects can provide healthy jobs, permanent and reduces coal use.
- **Energy Efficiency and Conservation** creates jobs, saves residents money boom and bust economy of coal.

However, many new projects seek to create a more just and sustainable transition away from the unstable

Appalachian coal counties worked hard to fuel the nation and make America rich—and yet they remain among the poorest regions in the United States.

But There IS Another Way...
